

Visible Light Communication

The camera at the front of the train judges the status of signal, etc.
AI prevents human error by the driver.

The only equipment required is a dedicated camera and signal.

Image of use for a level crossing

The camera reads the rapid flashing of visible light and issues an audio warning that an abnormality has occurred at the level crossing.

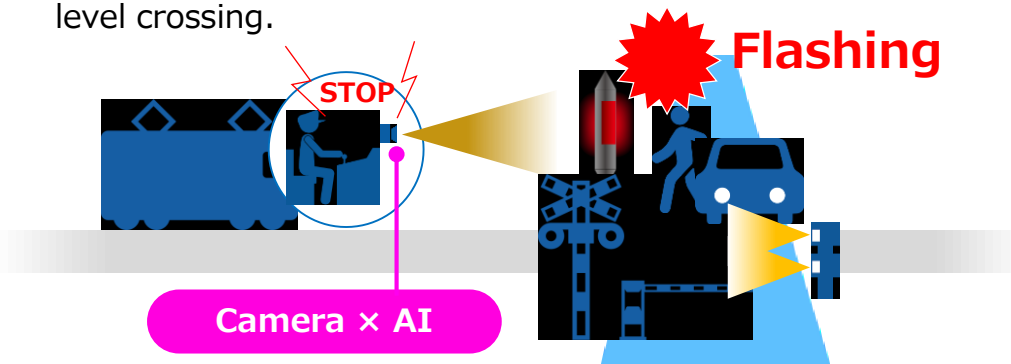

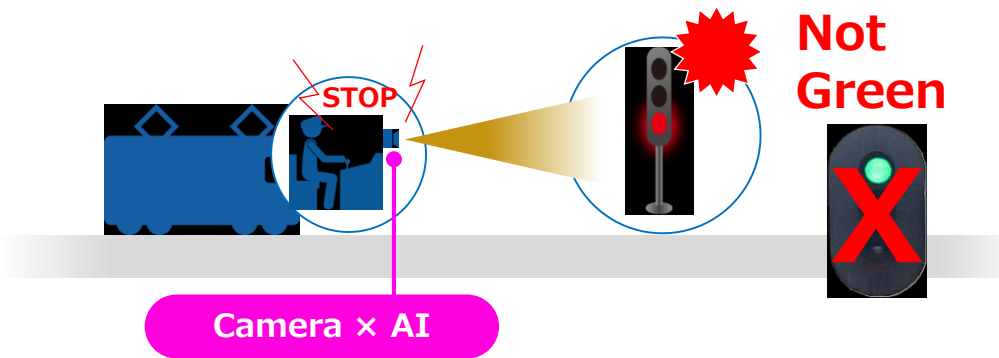

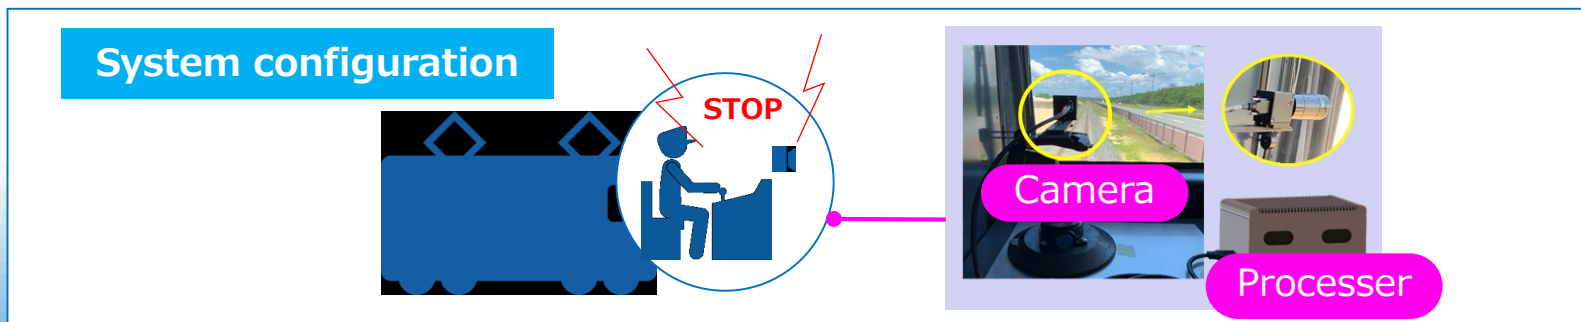

Image of use for signal

The camera reads the signal color and issues an audio warning when the signal color is not green.
